

M.Ed. T&T

MASTER OF EDUCATION IN TEACHING AND TECHNOLOGY

Hybrid Learning

"In the field of teaching, there is a trend toward the integration of technology into the teaching and learning process. With the increasing accessibility of information technology, it is imperative that present and future teachers and instructors are able to effectively utilize technology in their teaching processes.

Teaching is not limited to only formal education; it also applies to corporate training. Therefore, most academic institutions and businesses integrate and implement the utilization of educational technology into their institutions. However, the implementation of technology can be effectively utilized only by those who understand the benefits and are able to incorporate the technology in an effective way.

The Graduate School of Business and Advanced Technology Management realized the importance of developing professionals in the field of education and training who are competent in the implementation and utilization of instructional technology into the teaching process. Thus, the School offers an academic program, 'M.Ed. in Teaching and Technology,' to serve those who need to improve their knowledge as well as further their education."
